

# DETECTING LIVESTOCK PRODUCTION ZONES

*CARACTERIZACIÓN DE  
CIRCUITOS PECUARIOS*

Prof. José H H Grisi-Filho  
University of São Paulo (USP)  
Brazil

Punta del Este, 2016

# Context

- Guía Técnica de Trabajo – 5ª Reunión Extraordinaria de la Cosalfa:
- Characterization of productive systems
  - “To update the bovine productive systems based on farm premises, population, [...], *movement patterns* [...]”
  - “To use the characterization to identify geographic zones [...] that allow subpopulation *segregation with minimum impact* on the national productive system”
  - “To perform a detailed characterization of the chosen zones based on *geolocation and animal movements*”
  - “Animal movement information can be processed by *network analysis tools* ...”

# Networks in veterinary epidemiology

- How to use network analysis tools in animal movement problems?

# Networks in veterinary epidemiology

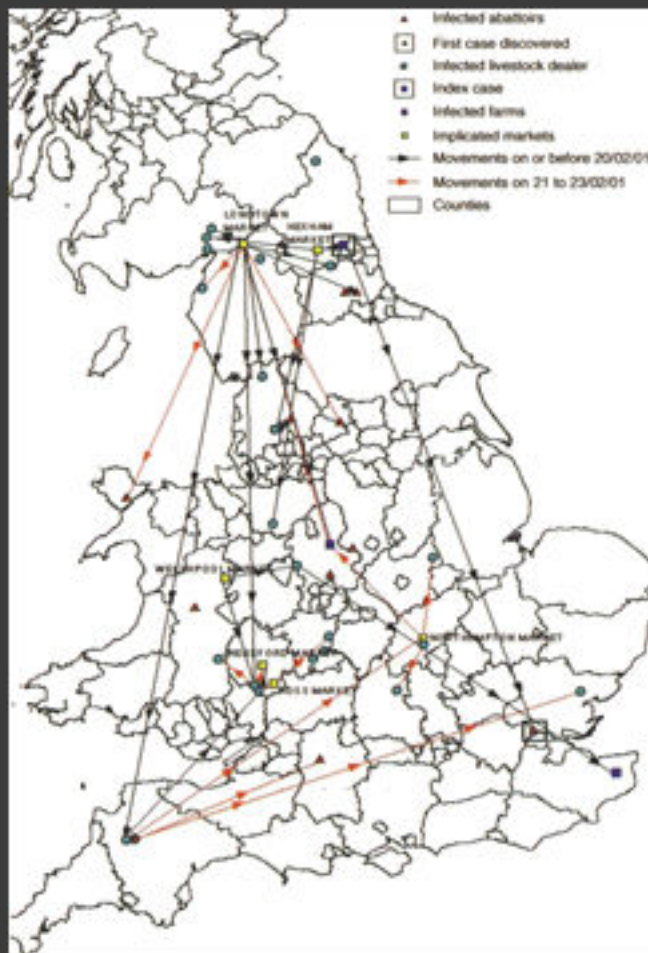

Accounts for movement direction and heterogeneity

- Nodes (Circles) = farm premises, counties, states, countries, etc
- Links (Arrow) = animal movement

# An example

Gibbens et al. Descriptive epidemiology of the 2001 foot-and-mouth disease epidemic in Great Britain: the first five months. **The Veterinary record**, v. 149, n. 24, p. 729–43, 15 dez. 2001.

A small fraction of an animal movement network

# An example

An entire network looks more like this...

Is it possible to split this network into cohesive groups?

# Networks

- It all began in the social sciences

My department colleagues' network

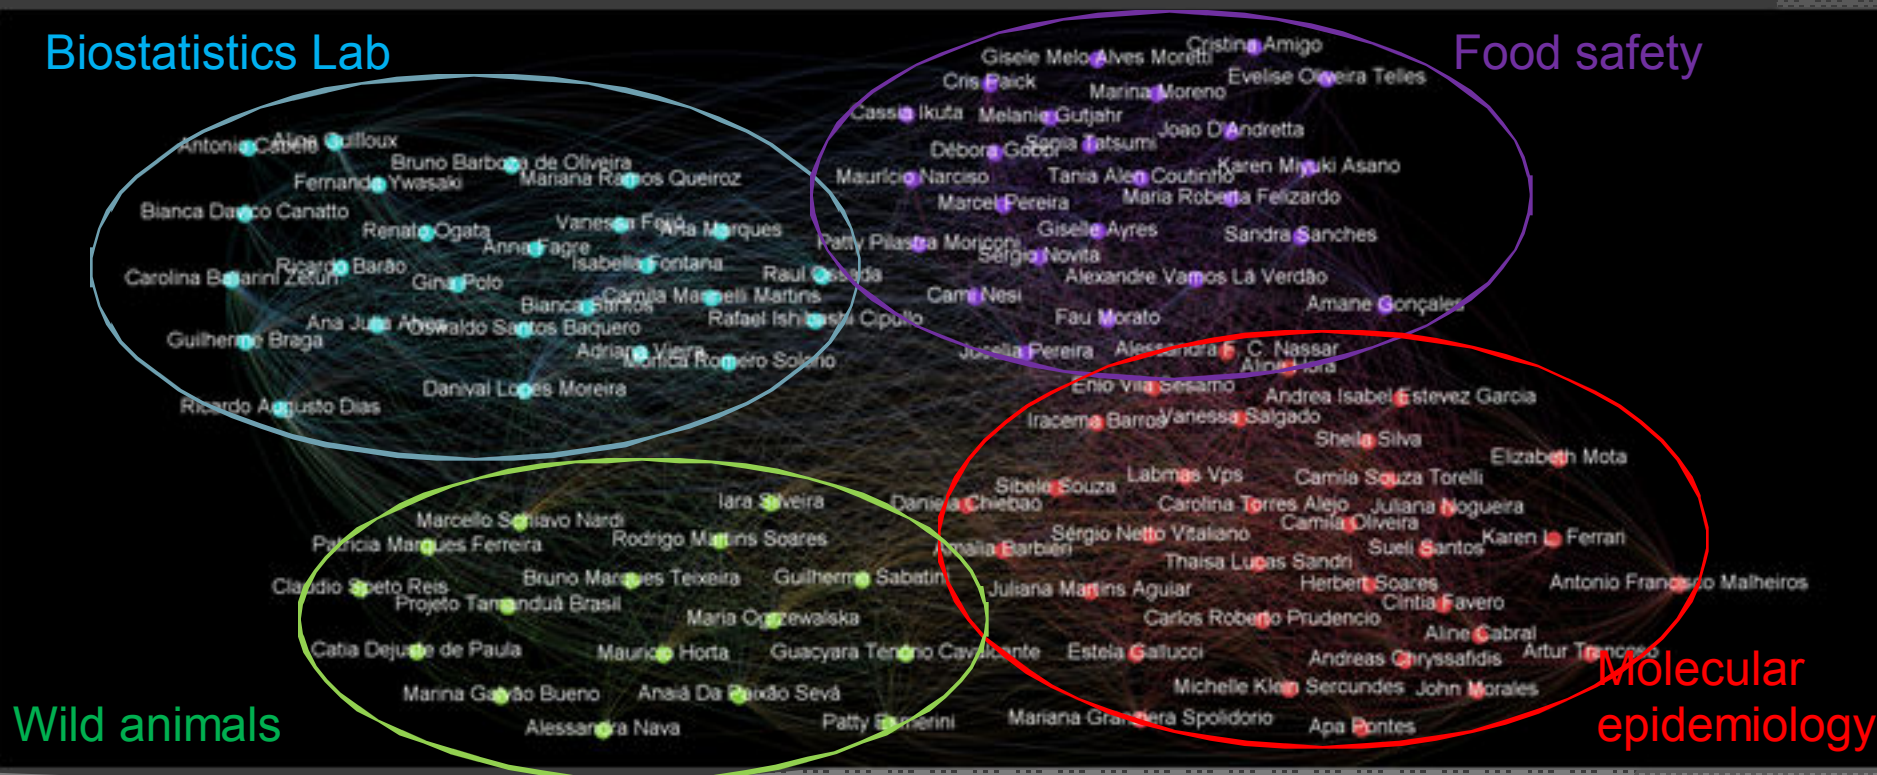

# Communities

- Sets of nodes intensely connected are called “communities”

Biostatistics Lab

Food safety

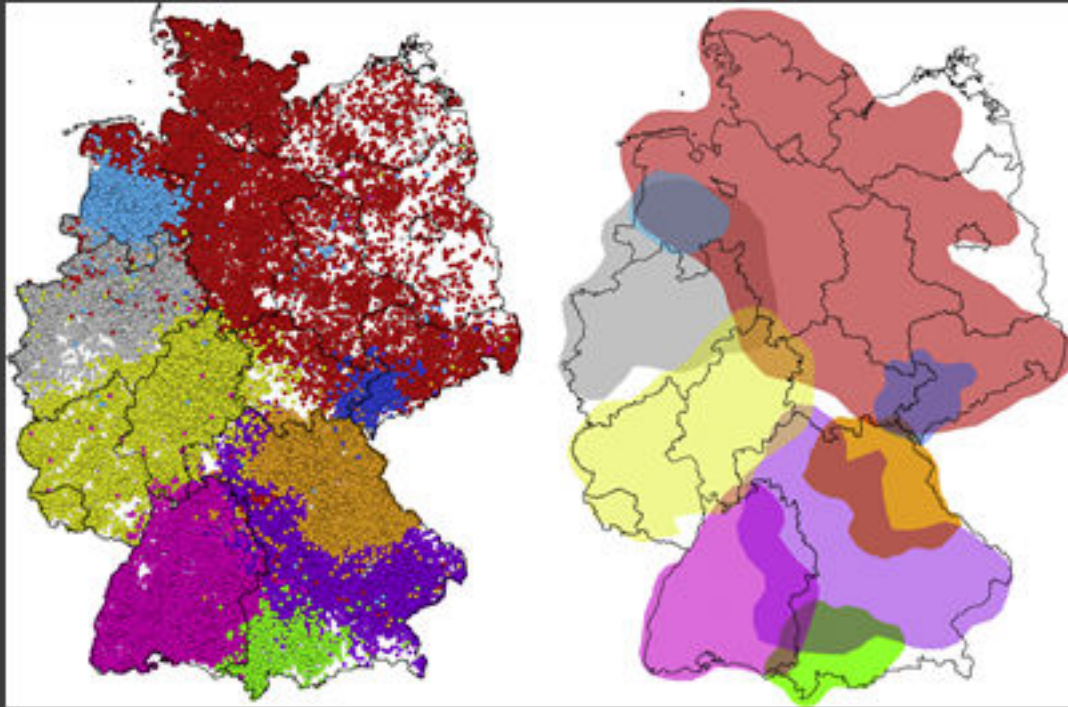

My department colleagues' network

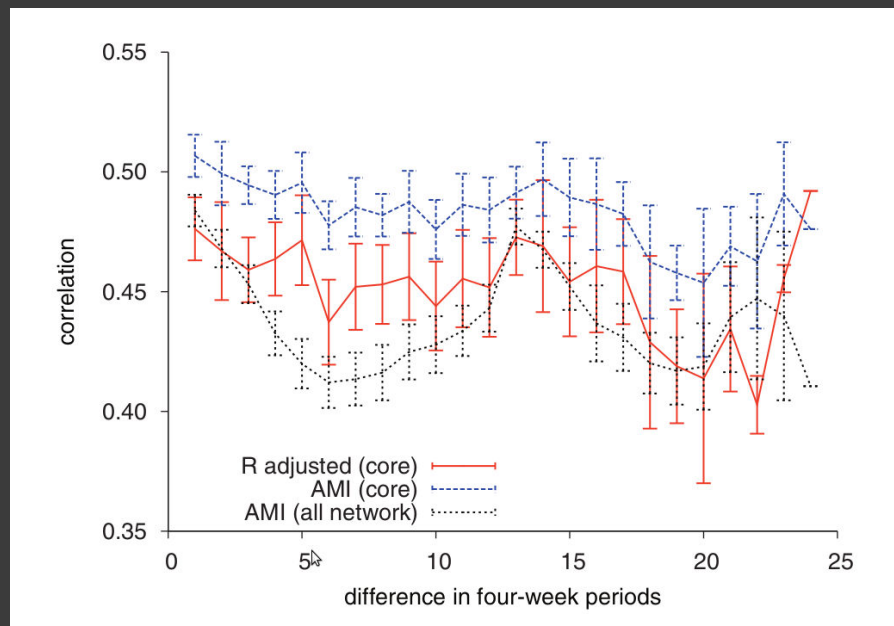

# Community analysis in veterinary epidemiology

Lentz et al. Trade communities and their spatial patterns in the German pork production network. **Preventive veterinary medicine**, v. 98, n. 2-3, p. 176–81, fev. 2011.

# Community analysis in veterinary epidemiology

Green et al. Tools to study trends in community structure: application to fish and livestock trading networks. **Preventive veterinary medicine**, v. 99, n. 2-4, p. 225–8, 1 maio 2011.

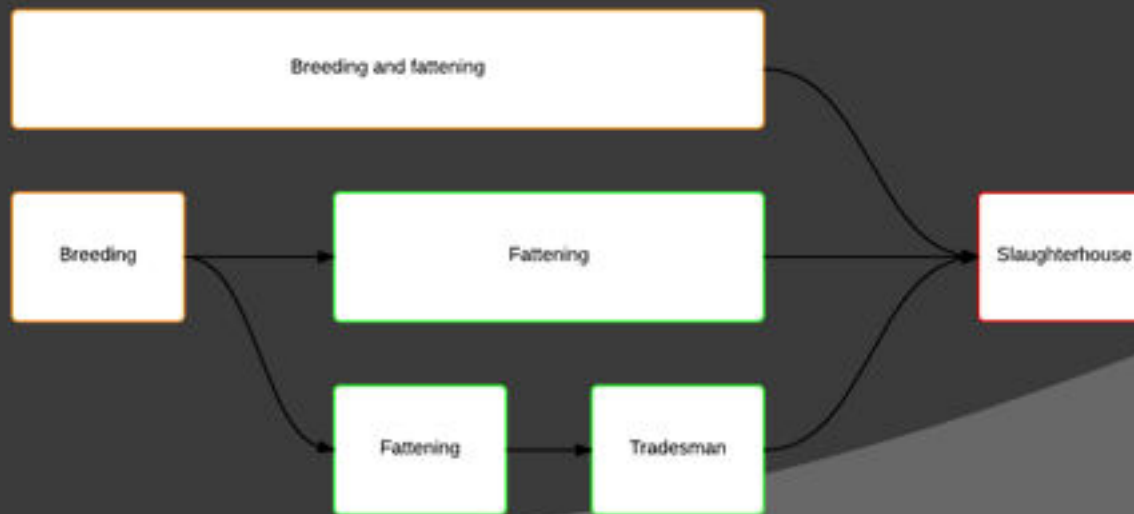

# Livestock production zones and communities definition

- Although the concept of livestock production zone is well understand, it is not so easy to define it.

# Livestock production zones and communities definition

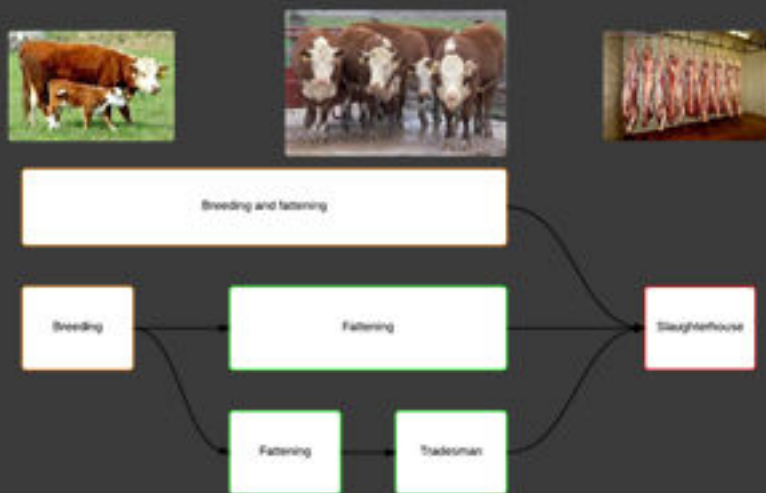

- Although the concept of livestock production zone is well understood, it is not so easy to define it.
- A very (very) simple example of a livestock production cycle:

# Livestock production zones and communities definition

- Although the concept of livestock production zone is well understand, it is not so easy to define it.
- A very (very) simple example of a livestock production cycle:

?

# Livestock production zones and communities definition

- ⦿ A livestock production zone could be defined as:
  - “a set of premises through which an animal will pass during the production cycle”

# Livestock production zones and communities definition

- ⦿ A livestock production zone could be defined as:
  - “a set of premises through which an animal will pass during the production cycle”
- ⦿ Community definition by Kim (2010):
  - “a community is a group of nodes in which a random walker is more likely to stay”

# The math behind it

## Modularity:

- Kim et al. Finding communities in directed networks. **Physical Review E**, v. 81, n. 1, p. 1–9, 2010

$$Q^{lr} = \sum_{ij} [L_{ij} - \pi_i \pi_j] \delta_{c_i c_j}$$

$$L_{ij} = \pi_i G_{ij}$$

$$G_{ij} = \frac{w_{ij}}{w_i^{out}}$$

## Optimization via Simulated Annealing

- Kirkpatrick et al. Optimization by Simulated Annealing. **Science**, v. 220, n. 4598, p. 671–680, 1983

$$P(\Delta E) = \exp(-\Delta E/k_B T)$$

## Validation via Entropy Theory (Variation of Information)

- Meilă, M. Comparing clusterings—an information based distance. **Journal of Multivariate Analysis**, v. 98, n. 5, p. 873–895, 2007

$$VI(\mathcal{C}, \mathcal{C}') = H(\mathcal{C}) + H(\mathcal{C}') - 2I(\mathcal{C}, \mathcal{C}').$$

$$H(\mathcal{C}) = -\sum_{k=1}^K P(k) \log P(k).$$

$$I(\mathcal{C}, \mathcal{C}') = \sum_{k=1}^K \sum_{k'=1}^{K'} P(k, k') \log \frac{P(k, k')}{P(k)P'(k')}.$$

# Community detection example

- State of Mato Grosso:
  - Largest herd of Brazil
  - ~ 30,000,000 bovines
  - vast majority in beef herds

# Community detection example

- State of Mato Grosso:
  - Largest herd of Brazil
  - ~ 30,000,000 bovines
  - vast majority in beef herds
- Animal trade network (2007)
  - 87.899 premises
  - 521.431 movements
  - 15.844.779 animals moved
  - Animal trade was aggregated by county, resulting in an network with 141 nodes and 3,980 links.

# Community detection example

- And after all this:

$$Q^{lr} = \sum_{ij} [L_{ij} - \pi_i \pi_j] \delta_{c_i c_j}$$

$$L_{ij} = \pi_i G_{ij} \quad G_{ij} = \frac{w_{ij}}{w_i^{out}}$$

$$P(\Delta E) = \exp(-\Delta E/k_B T)$$

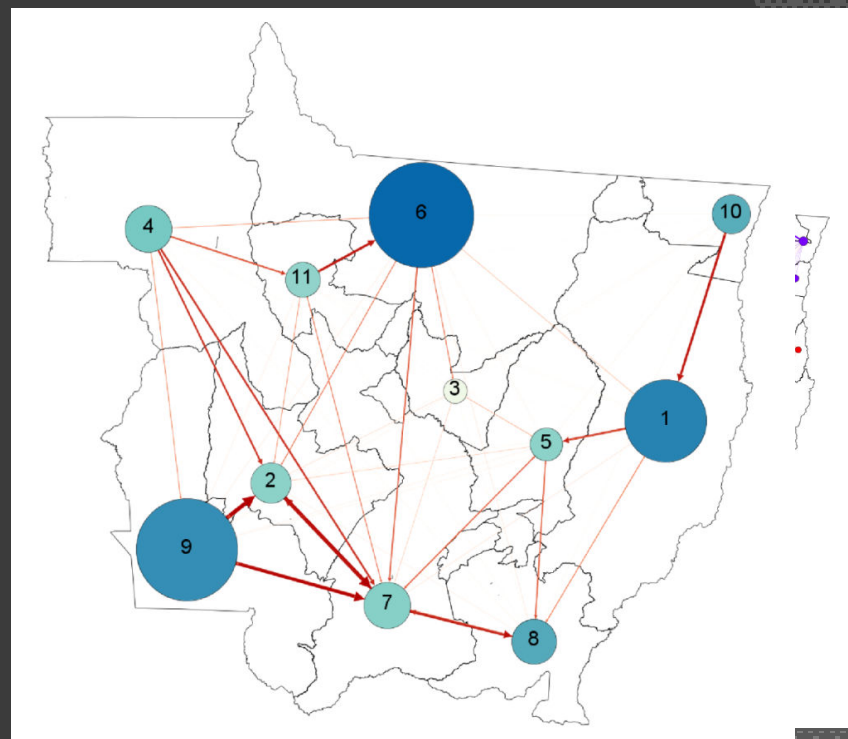

$$VI(\mathcal{C}, \mathcal{C}') = H(\mathcal{C}) + H(\mathcal{C}') - 2I(\mathcal{C}, \mathcal{C}')$$

$$H(\mathcal{C}) = -\sum_{k=1}^K P(k) \log P(k).$$

$$I(\mathcal{C}, \mathcal{C}') = \sum_{k=1}^K \sum_{k'=1}^{K'} P(k, k') \log \frac{P(k, k')}{P(k)P'(k')}.$$

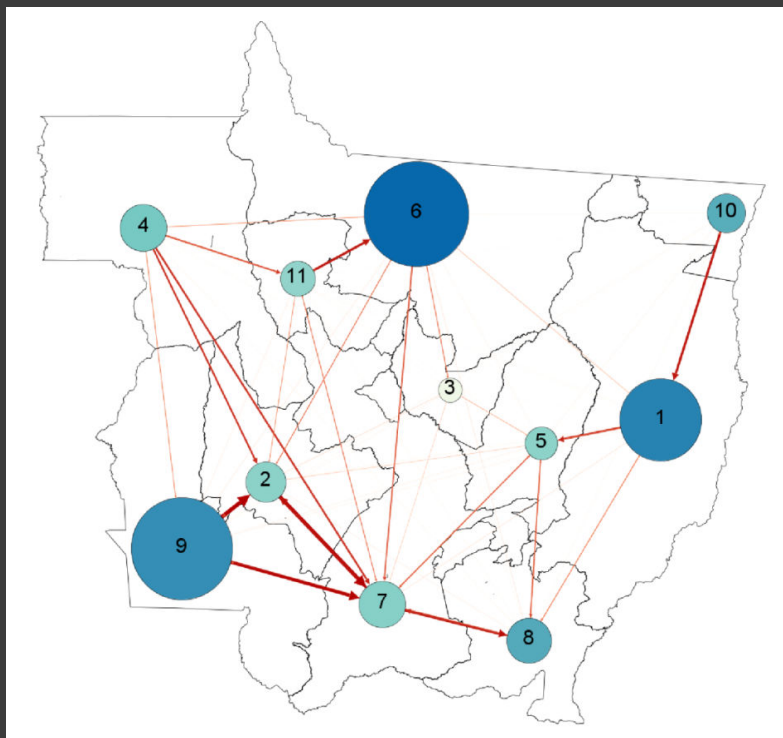

# Community detection example

Size and color proportional to internal trade  
color proportional to internal trade

# Community detection example

- Predominant flows:
  - North-South
  - West-East
  - Due to exports to other States

re

# Community detection example

**Table 1**

Outgoing moves (%).  $A_{ij} = (W_{ij})/(s_i^{out})$ , where  $W_{ij}$  is the total amount of animal movement from community  $i$  to community  $j$ , and  $s_i^{out}$  is the amount of community  $i$  outgoing animals. The found communities show a clear preference to sell animals internally. The animal trade made by the 2 ungrouped counties is not shown.

# Observations

- It is possible (and recommended) to aggregate other sources of information:
  - Surveillance system structure
  - Population structure
  - Livestock system
  - Expert opinion
  - etc

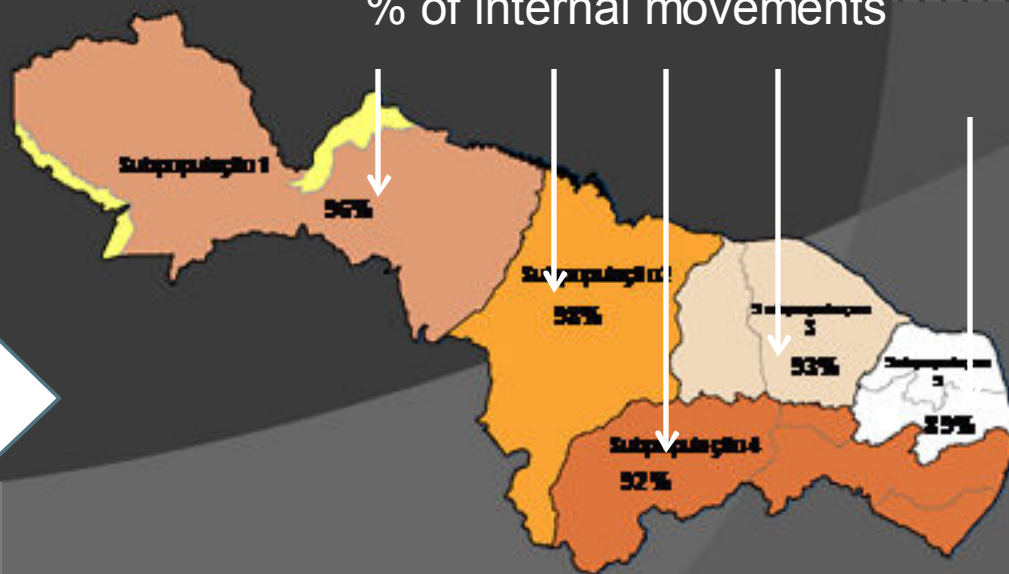

# Recent applications

Moraes, Barbosa Jr, Costa, Araújo, Teixeira, Grisi-Filho, Amaku, Gonçalves.  
Animal movement analysis and risk characterization in studies to evaluate Foot-and-Mouth virus circulation in vaccination areas. *Manuscript in preparation*

“Independence degree”:  
% of internal movements

# What do we need?

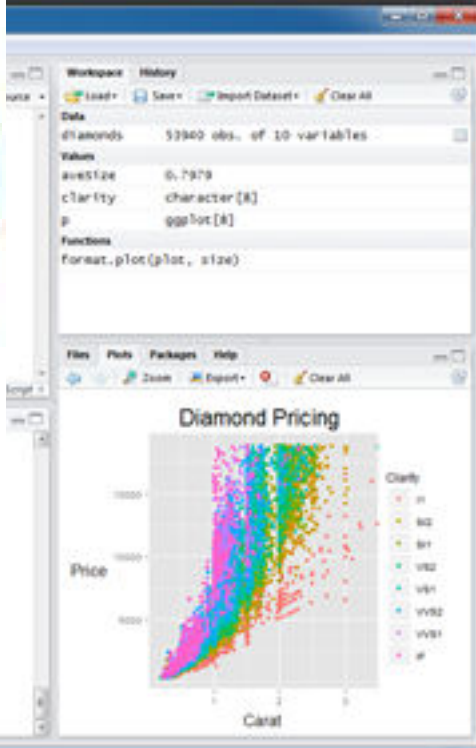

- ⦿ A good information system
  - Animal movements and farm premises
  - Integrity, accuracy, consistency, completeness
- ⦿ Technological infrastructure
  - Large storage and processing capacity
- ⦿ Human resources
  - Trained in epidemiology and network analysis

Gephi

# Final remarks

- ◉ We can reveal the trade patterns in an animal movement network
  - Leads to a better understanding on the trade relationship between production zones
- ◉ Can be used in
  - risk-based surveillance systems
  - stratified sample design
  - target areas for sanitary programs
  - segregate subpopulations with minimum trade impact
  - ...
